

What is a Student Access Code?

A student access code is a unique 8 character code that is automatically generated for each student, each time a sitting is created.

Students enter their access code into their [web browser](#) to access the Test Lobby and view their tests. For full details of this process, see [Test Taking Instructions for Students](#).

Finding Student Access Codes

Student access codes can be found within the [Student Progress](#) screen or within the [Student Login Details](#) PDF page.

Distributing Student Access Codes

Since the method of distributing access codes to students is not automated by the system, you can choose your own method of distribution, which could include printing out the PDF file and giving each student a physical piece of paper, emailing the access code to each student or entering their access code into the computer for them.
