

What is the Test Start Mode?

The Test Start Mode defines the way in which tests are started.

Automatic Test Start is the default Test Start Mode.

You can choose between two different types of Test Start Modes:

- Manual Test Start - tests are manually started by clicking the **Start Test** button. See [Manually Start Tests](#) for detail on how to use the manual start feature.
- Automatic Test Start - tests are automatically started on the date and time you entered in the 'From' box of the [Test Start Period](#) within the [Sittings Wizard](#). See [Automatically Start Tests](#) for details on how this feature operates.

The Test Start Mode is defined when you [create a sitting](#) or can be amended when you [change sitting details](#).
